COPPERHEAD CONDUCTOR RAILS

The Copperhead Conductor Rail.

The "T" or "hollow T" section and the extruded copperhead is drawn through a special die, which compresses the copper flanges around the dovetail head of the rail, connecting the two components to a 100% rigid unit. These conductors have proven an outstanding success for safe power feeding of: Travelling Cranes, Loading Bridges, Container Handling Equipment, Monorails, Hoists, Coking Machinery and

many other applications. The Copperhead Conductor Rails are available in sizes to meet individual current requirements from 200 to 3000 Amps.

The main users are: Steel Mills, Coking Plants, Gas Works, Cement Industries, Shipyards and Dockside enterprises, Transit and People Mover Systems.

Copperhead Conductor Rails with T-shaped steel bar and drawn up copper profile are the proven "Classics".

Aluminium-Copperhead Rails are very economical due to the light weight of the Aluminium and its high conductivity.

Solid-Copper Rails are recommended for heavy duty current rating and for humid locations.

Variation in temperature and resulting expansion and contraction is compensated by standard **Expansion Joints**.

If required **Copperhead Rails** can also be supplied/tailor-made as per customer's requirement.

Heating Systems are available.

Special Conductors up to 3,000 A capacities are available.

CONDUCTOR RAIL SYSTEMS

Profile	Туре	Material of Support Profile	Copper Cross Section (mm²)	Max. Capacity (A) 100 % ED / 35° C

Material Desc: - TELESCOPIC TYPE DISCHARGE ROD

Additional Specification:

TELESCOPIC TYPE DISCHARGE ROD WITH PVC INSULATED

CABLE 10 METER WITH ONE END COPPER SOCKETED AND

OTHER SIDE TO BE FIXED WITH CROCODILE CLIP.

Suitable for 33Kv.

<u>132kv discharge rod</u> telescopic type of 3 section total 5 Mtrs long, Epoxy grey colour fitted with Aluminiumdia casting rotating type earthing instrument to grip up to 50 Sq.mm dia conductor; Total section: 3 (Three) epoxy tube;

Total assembled height:

Size of first epoxy tube (Bottom section): 36mm x 42mm x 1670mm

----Do---- but middle section: 30mm x 36 mm x 1670mm

- ----Do---- but 3rd of Top section: 25mm x 30 mm x 1670mm
- (a) 5/8" diaAluminium cast earthing instrument
- (b) One side shield in bottom section.
- (c) Rubber grip = 2 nos
- (d) ISI Mark PVC Insulated Multi strand copper cable of 16 Sq.mm.wire as per IS: 694
- (e) Earthing Clamp "D" Type, Material Aluminium Alloy with adjusting Bolt;
- (f) Canvas carrying bag;

Complete Disc insulator bushing with bus clamp of 33 Kv switch Yard. Porcelain insulator brown glazed with metallic joint device Between two insulator will have one no bus clamp suitable for 33Kv switch Yard.

Bus Clamp will be made from LM-617 Grade Material.

HIGH VOLTAGE DETECTOR

290 HD

INTRODUCTION

The detector detects a high and extra high voltage in AC lines. An elongage insulation rod permits checking of high tension circuits at safe distance for voltage. Also it is telescopic compact, light-weight, easy to use and handy.

FEATURES

- Telescopic, compact, light-weight
 The detector length can be expanded from 1370 mm to 2450 mm
- Light weight (Approx. 59g), easy to use and handy
- High-voltage detectable

The equipment, whether in stretched state is available for voltage detection in high-tension (3 kV ~ 81.5 kV)

Easy to recognize indication

Intermittent lighting in red of a high intensity light emitting diode and intermittent audible sound of an electronic buzzer are easy recognizable at a full daylight, noisy location

· Water proof

The detecting head, being tightly enclosed, is free from any trouble due to dust, water

IEC/EN 61243-1, 60068-2-6, 60068-2-14, 60068-2-32

POINT GROUNDING ARRANGEMENT

3 POLE EARTHING AND SHORT-CIRCUITING DEVICE.

The rigid classification of the terminal points to the connecting elements as well as stated maximum clamping ranges must be observed. The cable length of the earthing and short-circuit device should be minimum 120% of the distance between two terminal points. Device will be assembly with the following spare such as, copper cord with transparent insulation (class –f) tube, shorting device (metallic of copper/GM), fixing clamps, earthing clamp (Heavy duty) etc. ctc. All copper components are electrolytic grade, having purity of 99.9%;

OTHER REQUIREMENT:

- (1) When screwing cable lugs of earthing and short-circuiting cables together with connection elements, it has to be ensured that a tightening torque of 30 to 40 Nm is kept.
- (2) Earthing and short circuiting device may be used with earthing rod (discharge rod)only.

(3)
